

Acquisition of TPU optical cables

Overview

Google's wholly-owned subsidiary, GU Holdings Inc., has applied for a license to construct, land, and operate the TPU subsea cable system. This 8,370-mile (13,470-kilometer) private fiber-optic network will connect Eureka, California in the United States with Taiwan, the. The Taiwan-Philippines-US (TPU) cable system is a trans-pacific fiber-optic submarine cable system connecting the United States with Taiwan and the Philippines, with a cable length of approximately 13470 kilometers. The TPU cable system is privately owned by Google through its various subsidiaries: e Service has previously issued four right-of-way permits for submarine telecommunications cables through the Refuge. Google's plan to lay a fiber optic cables that connect the Northern Mariana Islands to Japan and Guam, and extend a Taiwan-Philippines-U. cable to NMI will create a redundancy in communications and new opportunities, officials said. Let's build from the smallest module to the full cluster architecture.
