

## Bridging wire for distribution box door

### Overview

Braided soft copper wire has good conductivity and flexibility, and can adapt to the possible relative displacement between the box door and the box body, thereby maintaining the stability and reliability of the connection. So, can braided soft copper wire be used for bridging. When inspecting the interior of a stainless steel outdoor electrical box distribution box, pay attention to the copper or tin-plated terminals on the base plate or side walls. These locations are usually marked with grounding symbols for easy cable crimping. This wire is mainly used for the electrical connection between the metal box door and the metal box body of the distribution box to ensure reliable grounding and prevent leakage. How should I wire a construction switchboard when the supply has 3 phases and neutral but no separate ground: bridge PE to N, add grounding, or rely on an RCD?

If the supply is TN-C with a PEN conductor, bring the PEN to the construction switchboard and split it into separate N and PE there; do not. Yueqing Jilang Electric Appliance Factory, formerly known as Yueqing Jilang contact factory, was established in 1989 and has been established for 30 years. The dual modules have the Tips common and the Rings common, providing 1-in/4-out configurations for Line 1 and Line 2 that makes it.
