

## Cleaning Network Optical Cable

### Overview

Above is a breakdown of how to clean fiber optic cables. Fiber optic cables are a great networking solution but one that requires some care and attention, especially for the installation process. Several things can go wrong, so it's best to have the odds in your favor by ensuring your connections are clean and undamaged. Having clean connections is critical to ensure they're clean before installation occurs. Even a single spec of dirt can be the difference between a well-functioning fiber optic connector and a poor one. Additionally, if all your fiber optic connectors are properly cleaned for installation, it will make a difference. There are several things that users and technicians should avoid when cleaning fiber optic cables. A damaged fiber optic connector is worse than a dirty one.

**How To Use the Dry Cleaning Method** If you use the dry cleaning method, there are only two steps you will have to follow to be successful. Below is how to clean fiber optic cables using the dry cleaning method. 1. To begin, remove the dust cap and insert the click-clean pen or apply the CLETOP-S to the head of the cable. If you're using the click-clean pen, push until you hear a click, and if you're using the CLETOP-S, pull the trigger to clean the head. 2. After this, check the head with the fiber optic tester. If it is clean.

**How To Use the Wet-dry Cleaning Method** This method is the best way to clean a fiber optic cable. The wet-dry cleaning method is slightly more complicated than the dry cleaning method. If you clean your fiber optic cable and it's still not functioning, it may not be your fault. Fiber optic cables can have all sorts of problems. Odds are the cable has gone bad and you need to replace it. There are a few things to check if your fiber optic cables aren't functioning optimally.
