

Core Switch Internal Network Server

Overview

Enables IP routing between VLANs, subnets, and security zones, with advanced routing protocols. Modular chassis or stackable designs make it easy to scale as your network . A core switch is a high-capacity, high-performance Layer 3 switch positioned at the physical backbone of an enterprise network. Engineered to aggregate massive volumes of data from distribution switches, it provides ultra-low latency and maximum throughput to ensure uninterrupted routing and packet. It's more than just a switch; it's the central nervous system of your network infrastructure. A core switch operates at the italic core layer italic of a hierarchical network design, typically handling a massive volume of data traffic. These networks are designed with three tiers that facilitate strategic installation, management, and maintenance, and so on.
