

## Dimensions of cold aisle racks for field operations

### Overview

According to the ANSI/TIA/EIA-942-A standard, the recommended width for a cold aisle is 1,2 meters, which typically corresponds to the size of two double floor tiles. Cold air is supplied via perforated tiles at the front of the cabinets, which is distributed to cabinet by fans. This design is based on the following Convergence rack standard: The assembly of racks in "Contained cold aisle" helps to ensure that 100% of the air blown by the air conditioners in the room is used by the servers. Cold air is. Efficient airflow management in data centers relies heavily on proper Hot Aisle and Cold Aisle configurations. Maximum Aisle Length: When equipment cabinets form a continuous row. Beyond implementing basic measures such as sealing moisture out of the data center and improving air flow, aisle containment to prevent the mixing of hot and cold air stands out as a method that can dramatically reduce energy costs, minimize hot spots and improve the carbon footprint of data. RDF series 19" distribution racks PREMIUM rack series provides maximum compatibility with Targeted solutions developed for cabling support, load rating up to 500kg. The front and rear service clearances should be at least 1143 mm (45).
