

Distribution Box Clamp Test

Overview

The clamp tester applies controlled horizontal compression and vertical displacement to evaluate how packaging withstands real-world mechanical handling pressures, such as those experienced during automated warehouse storage, used by many e-commerce and parcel companies. Consistent clamp force distribution is critical in white goods, the bottling industry and a variety of other applications handling loads which are easily susceptible to damage. Powered by a fully electric system, it offers precise, repeatable performance without the variability of hydraulic or pneumatic. Our experts provide package clamp testing to evaluate the effects of horizontal compressive forces that result from handling via clamp trucks. We provide state-of-the-art package testing equipment and instruments that enable engineers to discover product vulnerabilities and make necessary improvements to optimize their shipping methods. Utilizing Cascade's 4-Point Force Distribution Tester to recalibrate Carton Clamp force distribution on a regular basis.

Article Content

Device Clamp Force Gauge PCE-4PCFM

The four-point tester gives you the opportunity to quickly and easily check the settings on the device clamp and adjust them if necessary in order to avoid damage to the goods to be transported due to ...

Package Clamp Testing

Our experts provide package clamp testing to evaluate the effects of horizontal compressive forces that result from handling via clamp trucks. Clamp testing is crucial to assess a packaged product's ability ...

Comprehensive Guide to Package Clamp Testing Machines

We'll navigate through the nuances of clamp testing, offering insights into how these machines enhance package safety and efficiency, a crucial aspect for businesses in the supply chain industry.

Packaging box clamping tester standards

The packaging box clamping tester tests the deformation of the product packaging under horizontal pressure during transportation and storage, as well as the protective ability of the packaging to the ...

Clamp tester

Innovative package clamp testers, focusing on clamping force, closely simulates real-world handling and transportation conditions. This ensures that packaging materials are tested under scenarios that ...

Package testing equipment and instruments

Specialized test systems repeatedly release items from varying heights, from different orientations and sometimes onto different surface types to evaluate a package's ability to protect them in the ...

Clamp Tester

The Clamp Tester is an advanced compression testing system engineered to simulate the horizontal forces exerted on packaging during handling, storage, and distribution.

4-Point Force Distribution Tester

Utilizing Cascade's 4-Point Force Distribution Tester to recalibrate carton clamp force distribution on a regular basis ensures products are handled securely and damage free - every time. The portable ...

Clamp Meters | Test & Measurement | Tools & Equipment | Southwire

Bare Aluminum Overhead Transmission & Distribution. Building Wire. Copper Bare & Covered. Covered Aerial MV (CAMV™) Systems. Canadian Products.
