

## Distribution box is running with green light

### Overview

Flashing green and red lights usually mean the box is stuck in a boot error or firmware issue, so wait a few minutes to see if it recovers ☐. If it doesn't, restart your modem, let all lights stabilize, then turn the box back on ☐☐. It is understandably confusing when a Ground Fault Circuit Interrupter (GFCI) outlet displays a green indicator light but fails to deliver power to a plugged-in device. The illuminated green light confirms the unit's internal electronics are receiving power and that the GFCI has passed its. A green light proves that the GFCI carried out an internal test which it passed. The GFCI's protective mechanisms are operational. Does the green light indicate it is operational & active or reset (test)?

Perhaps you have to REALLY push reset. Leviton GFTR1-3W 3pk GFCI Outlets 15A-125V I tried many times to press hard on the reset. Let us explore in greater detail why this may occur under different circumstances. Start by checking the common issues described here. If the problem persists, contact the point of purchase (Victron dealer or distributor) for technical support.
