

Do cable trays need to be capped at the ends

Overview

Due to their exposure to the open air because of the cable trays, the wires contained within need a very durable outer covering. The regulations dictate that the cables must either be Type TC (also known as Tray Rated) or must be metal-armored (Type MC). This is a description of how to select, install, and support these metal or plastic frames, on which electrical wires are installed. You should consider it as a series of instructions that make the buildings resistant to. Prohibited Areas: Cable trays cannot be used in hoistways or enclosed spaces and must remain accessible. Grounding: Metallic trays can serve as equipment grounding conductors (EGC) if they meet NEC requirements. Here is the summary of the main points found in NEC Article. This guide covers the critical steps, from selecting the right electrical cable tray and performing accurate cable fill calculations to managing a safe cable pull through and ensuring all bonding and grounding requirements are met.
