

# Does a home charger need a distribution box

## Overview

Residential EV charging typically requires single-phase distribution boxes with 32A to 63A capacity, Type A or Type B RCD protection, and basic surge protection. The location will be right next to the electric meter (which is outside in an electric meter cupboard). 4 kW chargers are designed to operate on a single-phase. An EV charger, also known as an electric vehicle supply equipment (EVSE), is used to supply electrical energy to charge an EV's battery. The installation typically involves connecting the EVSE to the home's electrical system, which includes the meter, the fuse box (also called the electrical panel). This booklet was designed to serve as a guide for developers, homeowners, consultants, and contractors requesting new electric service, or a revision to existing electric service, from the Los Angeles Department of Water and Power (LADWP). Please note that good communication, prompt submission of. EV chargers installed direct to meter box - is it really wrong?

On another forum for general EV chat this question comes up all the time.
