

Domestic AI Computing Servers See Explosive Growth

Overview

Chinese server and chipmakers are entering a 'super cycle' as local governments pour money into AI-related computing infrastructure. The AI Computing Power Concept Index, compiled by Wind and tracking 54 related stocks, reached a record high on August 25, 2025, up 166%. Ever since China's DeepSeek artificial intelligence (AI) chatbot made headlines in January, the country's cloud computing and internet industries have been racing to develop AI for consumers and businesses, according to Goldman Sachs Research. Our analysts expect power demand from China's data. The AI data center market is growing at 28.3% CAGR, far outpacing traditional data centers. Amazon has. Artificial intelligence has developed rapidly in recent years, with tech companies investing billions of dollars in data centers to help train and run AI models. The expansion of data centers has raised questions on several fronts, including the effect these facilities may have on energy and the. Major stock indices in the Chinese mainland reached multi-year highs on Monday, fueled by the booming artificial intelligence (AI) and semiconductor sectors. IDC data shows that the scale of China's accelerated server market will reach US\$5 billion in the first half of 2024, a year-on-year increase of 63% from the first half of 2023. These figures were not only significantly lower than the market's previous.
