

## Fiber Optic Cable Fixing Sheath

WebiTelecomms Cabling

### Overview

The fiberglass-reinforced composite material is easy to apply and forms a durable, maintenance-free covering that hardens in about 30 minutes and fully cures in 24 hours. It can be used on pressurized or non-pressurized cable and either polyethylene or lead sheathed cable. These types are (Figure 1): Type A 1) The sheath is peeled or chipped. Type B - A damaged section of cable sheath with a portion of the armor. This best practices document is a step-by-step guide for end and midspan access of loose tube optical cable, including sheath removal, core preparation, and fiber preparation. Shop products from small business brands sold in Amazon's store. Learn more Need help?

Corning® Armorcast™ structural material is a flexible fiberglass knit fabric strip that has been saturated with a urethane resin syrup that starts to cure when water is added.
