

Fiber Optic Switch Optical Terminal Description

Overview

ONT stands for Optical Network Terminal. An ONT is a device that translates light signals sent through fiber optic cables into data that your devices can understand and use. For purchasing, use the RP Photonics Buyer's Guide for fiber-optic switches. It provides an expert-curated supplier directory, buyer-focused technical background information, and structured selection criteria to support professional procurement decisions. Now what?

You can't plug a raw glass strand into a Wi-Fi router. This guide is designed to demystify the ONT completely. Nowadays, as online demands grow, more people are leveraging cutting-edge fiber internet to stay connected. A recent market research study predicted that fiber will power 59% of broadband connections. An optical network terminal (ONT) unit is a device that connects fiber optics cables to other wiring such as Ethernet and phone lines by converting the signal from optical to electrical and vice versa.
