

Fiber optic router has no wireless network

Overview

Checking the router's Internet Protocol (IP) address is the key starting point — it tells you whether the problem is with the router itself or the modem. Video guides are also available below. If you work through all the steps and still need help, you can reach out through the. I had an existing setup of a very old tp-link wireless router, connected directly to a "EPON ONU" modem like this one (looks exactly the same) which is connected to a fiber optic connection. I wanted to replace the old wireless router because I keep needing to restart it every 2-3 days due to the. Fiber optic networks are celebrated for their speed and reliability, but even the best systems can encounter problems. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. Need help checking?
