

How to connect an active optical fiber switch

Overview

Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach cables with pre-terminated SFP connections may also be used. Fiber provides: Increased internet signal bandwidth. The process requires understanding the type of fiber optic port on your switch and selecting the appropriate transceiver module. Why Use Fiber Optic Internet?

Before diving into the setup, let's quickly. This is a cost-effective and high performance way to connect network switches. SFP transceiver modules are specific to the type of fiber being connected. Use Twisted pair cable to connect ETH1 or ETH2 with your computer and configure the device and computer in the same IP segment, then type the IP address from the website banner in your computer to go into the WEB management interface, WEB address:192.
