

How to connect the base station optical module to the pigtail fiber

Overview

Splice the pigtail on the switch side to the main cable and directly connect the pigtail to the HDF. For the introduction and connection method of the hybrid cable terminal box, refer to the Huawei Hybrid Cable Terminal. Field-terminating connectors is a meticulous, high-pressure process where even a tiny mistake can force you to cut the fiber and start all over again. This is exactly why most professional installers have moved away from field-termination and toward splicing. If you're new to fiber optics or want to enhance your technical skills, this guide will help you understand how to splice fiber pigtails safely and efficiently. 1G/10G SFP+: Standard for Gigabit and 10 Gigabit Ethernet. The fiber optic pigtail is a short terminated optical fiber with a connector on one end, used to facilitate easy connections between fiber optic cables and various devices.
