

How to disconnect a 10 Gigabit direct-connect optical module

Overview

Gently pull the module latch or release ring, depending on the module design. Disconnect the optical cable. Small Form-factor Pluggable modules (SFP module) are the workhorses of modern network connectivity, enabling flexible fiber optic or copper links between switches, routers, firewalls, and servers. Whether you're upgrading bandwidth, replacing a faulty unit, or reconfiguring your topology, knowing. After removing the optical cables, protect them by inserting clean dust plugs into the SFP or SFP+ modules, and make sure to clean the optical surfaces of the fiber cables before reinserting them into the optical bores of the SFP or SFP+ modules.
