

How to jumper wires on the switch in the distribution box

Overview

Using one jumper wire, attach the three ring terminals to the centre post on the left side of each switch (note that this may be post #2 or #5). Wiring two light switches in a single electrical box, often called a double-gang box, allows for independent control of two separate light fixtures or devices from one convenient location. This configuration uses a single incoming power source that must be distributed to both switching devices. In order to better let everyone understand "jumper", let's take a look at a photo. I have a box with 2 switches. 14/2 romex line wire to common and load wire on top. The other switch I am installing 3 way switch to the hallway lights. • 3-phase 4-wire distribution system In this video, I'll show you step-by-step how to wire a distribution board (DB) safely and professionally. Circuit Breakers - Protect the system from overloads and short circuits.
