

Install the splitter and connect it

Overview

Attach the short length of the coax cable to the wall outlet and to the IN port of the splitter. Installing a 2-way coaxial splitter is a simple yet crucial step when it comes to setting up a home entertainment system or establishing a cable TV network. It does not increase speed or create extra bandwidth. It simply divides signal pairs. This tool works best in basic setups where running another cable is not possible. In this guide, we'll explain how to safely connect a splitter to another splitter, covering both fiber. If you're connecting internet and cable TV services (not MidcoTV) via the same coax cable wall outlet, you will need: To install a splitter: Connect one coax cable to your coax cable outlet, and to the splitter's "IN" connection. The splitter should only be used if the outlet will be.
