

# Installation of Fireproof Low-Voltage Cable Trays in Mauritius

## Overview

Cable trays and busways at floor level or at slab penetrations shall have a waterstop no less than 50 mm in height. At slab penetrations, provide 20–30 mm of firestopping and install a fire-support plate at the top. Sealing shall be tight and reliable, without visible. In this blog, we will explore the common issues encountered during the installation of fire-resistant measures for cable trays, the essential construction process requirements, and the quality standards that should be met to enhance fire safety. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with. These regulations may be cited as the Electricity (Safety of Low-Voltage and Medium-Voltage Electrical Installations) Regulations 2004. Route Planning and Layout Principles Coordinate with Building Structure: Cable tray routing should align with architectural design, avoiding unnecessary. High-voltage and Low-voltage (HV & LV) cable work is the core of our business. Our main clients being the Central Electricity Board (CEB).
