

KVM switcher cannot refresh at high speed

Overview

Adjust display settings in Windows and Mac to fix KVM display resolution issues. These problems often arise from using low-quality adapters or when the monitor's HDMI. KVM switch resolution issues are often caused by cheap adapters or monitor limits, not the KVM. Check your monitor's manual for true specs; manufacturers may advertise misleading refresh rates. Here are my specs: The KVM Switch manual states it can support 1920x1080p at up to 120hz. I can plug my monitor directly into my GPU with a Displayport cable and. Has there been success running a combination of high refresh (>120Hz) and HDR?

The KVM can do up to 240Hz HDR with DSC (display stream compression) and 120Hz HDR without DSC. I'm able to get a 165Hz signal through with HDR enabled, but I see flashing horizontal line artifacts. No matter how we use it, it does support a number of servers to connect to the same set of consoles, saving us desk space and a good number of hardware costs. Before giving away the money, you may.
