

Key Components of CFO Optical Modules

Overview

An optical module primarily consists of optoelectronic devices, functional circuits, and optical interfaces. The core optoelectronic devices include the Transmitter Optical Sub-Assembly (TOSA) and the Receiver Optical Sub-Assembly (ROSA), with lasers and detectors forming the core. Enter Co-Packaged Optics (CPO), a transformative architecture where the optical engine moves inside the switch ASIC package. This article provides a comprehensive overview of CPO optical modules, exploring their technology, benefits, challenges, and the pivotal role they play in future data centers. Optical internetworks are data networks composed of routers and data switches interconnected by optical networking elements. From Jensen Huang showcasing CPO switches at GTC 2025 to a wide range of vendors demonstrating optical engines integrated inside ASIC. Check out our webinar, Scalable Fiber Solutions for Co-Packaged Optics (CPO) Applications, in which industry experts from Corning and Broadcom explore key design considerations, fiber handling practices, and effective deployment strategies for navigating the emerging field of co-packaged optics. The performance and reliability of optical modules directly influence the overall efficiency of the communication. This document provides guidance on the requirements for co-packaged optic assemblies designed for high-radix, network switch applications with 100Gb/s electrical interfaces. Introduction The CPO JDF plans to release three documents focused on different elements of Co-Packaged Optics (CPO): the.
