

Router fiber optic indicator light is green

Overview

Blinking green typically means data is actively being transmitted, which is also normal during use. Orange, amber, or red lights usually indicate a problem ranging from a firmware update in progress to a lost internet connection. But some models always maintain green or white colored lights and use blinking to signify different states. Red or. Router status lights, often referred to as LED indicators, are small lights on the front panel of your router. These lights help users understand the operational state of the device and its various components. Typically, these lights correspond to various router functions such as power. A green blinking light might signal that a router connection is in use and network traffic is flowing, like when you're streaming a movie or playing games online.
