

Should the user access switch be placed on top or bottom

Overview

It's common practice to place network switches at the top of the rack. End-of-rack switches are more suitable for traditional data centers that do not require high scalability, while top-of-rack switches are more suitable for access switches or aggregation switches in modern data centers with high scalability. Well the 28 CFR part 36 ADA. Panelboards shall be installed in accordance with the listing of the panelboard. The National Electrical Code (NEC) provides comprehensive safety standards for electrical installations, including requirements for electrical panels (main service panels and subpanels or breaker box). How should I stack these items ?

I am thinking from top to bottom: Does this make sense?

Would love to hear how others have done their setup. Most are installed at a standard height, but adjustments may be needed. Where Should a Switch Box Be Placed?

In most.
