

Ukraine Optical Cable and Fiber Project

Overview

Ukraine is set to join a major international venture laying a new high-speed internet cable under the Black Sea, linking Europe and Asia while bypassing Russia. The high-capacity Kardesa cable system project, led by the Vodafone Group and Vodafone Ukraine, will cost more than €100. Ukrainian commander gives us new details on the advantages and limitations of using fiber optic cables to control FPV attack drones. As the full-scale Russian invasion of Ukraine enters a fifth year, technological advances continue to reshape the battlefield. He has also covered the US elections from Washington, DC. Due to their compact diameter, light weight and smooth outer sheath with a low friction coefficient, they provide minimal air resistance and efficient laying over long distances without additional connections.

Article Content

Fibre-optic drones reshaped the war in Ukraine. Hezbollah are now ...

Hezbollah has introduced a new, difficult-to-detect weapon against northern Israel: small drones controlled by fibre-optic cables. These devices, with cables the width of dental floss, are ...

Electronic Warfare How Fiber-Optic FPV Drones Are ...

Fiber-optic drones, immune to jamming thanks to a cable-based connection, were first widely used by Russia in the Kursk region to bypass ...

Vodafone Group, Vodafone Ukraine to build Black Sea ...

The undersea fiber-optic network, called Kardesa, will connect Ukraine, Bulgaria, Georgia, and Turkey. The first cable landing is planned for ...
