

# What type of iron is used for grounding the distribution box

## Overview

A GI (Galvanized Iron) earthing strip is a strip made of galvanized iron used in electrical systems for grounding purposes. A ground rod, also known as an earthing rod, grounding rod or ground electrode, is a long, slender metal rod that is typically made of materials like copper or steel. A wire-type EGC installed in compliance with 250. 6 (A) and the applicable requirements for both the EGC and the GEC in Parts II, III, and VI of Article 250 is permitted to serve as both an EGC and a GEC. Code Change Summary: The language on the types of equipment grounding conductors has been. Rust can accumulate on exposed iron or steel and degrade the conductive capacity of the rod. Unfortunately, this rust will rarely be visible to an inspector. Electricians have been known to cut the rod when they have difficulty inserting its entire length beneath the ground. Grounding bars and rods provide a physical connection to the earth and are used.
