

## Which port should the optical module of the aggregation switch be plugged into

### Overview

Insert compatible 10G SFP+ modules (not included) into the SFP+ ports on the front panel., servers, other switches, NAS devices). The UniFi Aggregation Switch is managed by the UniFi Network Controller. When PEN remote optical modules are connected to ports on a passive aggregation module, they do not need to be paired based on wavelengths. However, the IDs of the PEN. The Small Form-Factor Pluggable (SFP) port on a Gigabit switch is a slot designed for use with SFP connectors to facilitate data transmission. Unlike fixed RJ45 copper ports, SFP ports support both fiber and copper modules, enabling far longer distances, greater flexibility, and improved scalability in enterprise. These ports are designed to accept SFP modules, which can be either fiber or copper, and let you customize the uplink for your needs. You'll find SFP ports on UniFi switches like the USW-24, USW-48, USW-Pro, and on certain gateways like the UDM Pro and UXG-Pro.
