

## Which type of distribution box needs a grounding test

### Overview

The NESC requires multigrounded distribution system neutrals to be effectively grounded (Rule 96C). Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical insights into proper grounding techniques, with a special focus on how selecting quality materials from a reliable building material supplier impacts your entire system's safety and longevity. This helps to reduce the potential difference that exists between conductive parts and the earth. Each DISTRIBUTION BOX and controller must be grounded. 26 mm<sup>2</sup> (10 AWG) ground wire must be used, and in all other markets a 6 mm<sup>2</sup> must be used. Specialized earth testers, like the Fluke 1630-2 FC Earth Ground Clamp and the Fluke 1625-2 GEO Earth Ground Tester, are the troubleshooting tools built to make earth ground tests a lot easier. Ground bonding common with lightning protection system.
